

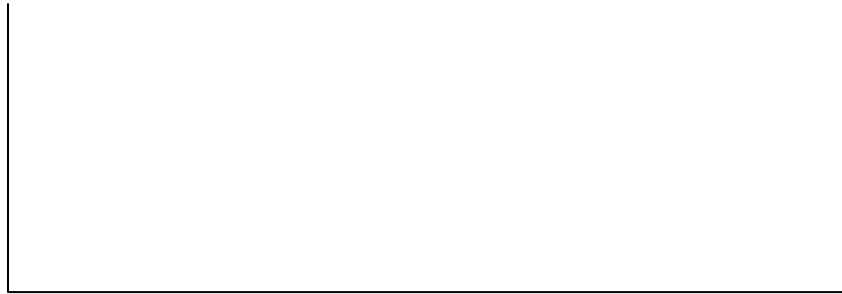

Graphic Examples of Driving

For each scenario below, draw a graph that could possibly represent the driver's **distance from home** as a function of **time**.

1. I left home in a hurry but slowed down after I saw the radar unit.

2. I started home from school at a leisurely speed, but about half way home I realized I had left my cell phone in the classroom, so I had to hurry back.

3. I left home at a rapid speed, but was slowed by construction for a little while. Then the flagman stopped me completely. Since I was already late, I drove leisurely the rest of the way and listened to the radio.
